## GARDEN HYACINTHS

For Early Spring Bloom

For beauty and fragrance combined, hyacinths are unsurpassed among the spring flowering bulbs. They may be used very effectively for edgings, or in groups among other flowers. Plant the bulbs 6 to 7 inches deep and about 6 to 8 inches apart. In light well drained soil which is not subjected to winter freezing the bulbs may be left in the ground but the general rule is to lift them after the tops have died down about July. Store them in shallow trays and dust with dusting sulphur. Planting time varies with the climate conditions. In the mild winter section of California we recommend planting about November. Keep them moist by deep irrigation as often as is necessary.

**Our GARDEN hyacinths are medium sized bulbs and are intended mainly for outdoor planting where they will produce beautiful large spikes of flowers.**

**DUKE OF WESTMINSTER**—Deep blue, white center.

**EDELWEISS**—Pure white, very fragrant.

**GERTRUDE**—Rosy-pink, compact truss.

Each 35c, 6 for \$1.75, 12 for \$3.00, 100 for \$21.00

**JAN BOS**—Best deep red.

**LADY DERBY**—Bright rose pink.

**QUEEN OF THE BLUES**—Best light blue.

**YELLOW HAMMER**—Pure yellow. Early.

## EXHIBITION

These extra large bulbs will produce giant spikes of lovely flowers.

They are intended for garden planting or for pots, hyacinth glasses, etc., where the largest spikes are desired. In our San Francisco climate we keep the potted hyacinths outdoors in the shade until they are ready to bloom, then they may be taken into the house.

45c each; 6 for \$2.25; 12 for \$4.00;  
100 for \$27.50

**HYACINTH GLASSES**—Clear glass. Packed and postpaid 75c each.

## Grow Bulbs in Pots With HALLAWELL'S BULB FIBRE

Anyone can grow bulbs in pots or bowls with excellent results. We grow them every year for demonstration purposes, especially Narcissi, Hyacinths, Crocus, Freesias, Sparaxis, Muscari, etc. Of the larger bulbs such as Narcissi, plant 4 or 5 in a 6- or 7-inch pot. Of the smaller bulbs put many in a pot, plant them close together and about 1 inch deep. Moisten the bulb fibre before planting and keep it moist after.

In our San Francisco climate, best results are obtained by setting the pot or bowl of bulbs out in the garden where it will be in bright daylight and cool. Leave it there until the first buds are ready to open, then take it into the house.

The finest strain of Ranunculus in existence. Large wavy petaled flowers with perfect form, developed in the most desirable shades of red through yellow, orange, and pink to white.

The branching plants grow 18 to 24 inches high producing a succession of fine long stemmed flowers for colorful garden display and for cutting.

In mild climates plant during fall and winter months; cold climates in the spring. Set Jumbo bulbs one foot apart each way and 2 inches deep, claws pointed downward. Set large and medium bulbs 6 to 8 inches apart. In heavy soils add sand and peat moss or leaf mold; keep thoroughly moist but not soggy wet.

**CAROLINE VANDE BERG**—Large lilac-blue florets, a shade distinctly different from any of the blues.

# Hallawell's TULIPS

*Direct From Hallawell's  
Holland Growers*

ALL our Tulips are EXTRA SIZE BULBS for PRIZE BLOOMS direct from Hallawell's Holland Growers. The varieties we offer are THE FINEST and MOST BEAUTIFUL you can grow.

These tulips are all highly recommended varieties, the finest and most beautiful you can grow. For best results plant them 7 inches deep. Remove the soil to a depth of about 10 inches, loosen the bottom soil, spread some bonemeal and cover it one inch with soil, set the bulbs 5 or 6 inches apart each way and replace soil. Be sure to keep them well watered—good deep watering, from the time they are planted until they have finished blooming. You may cut the flowers, but leave the foliage to die down. The bulbs may be left in the ground and other garden plants grown on top.

## IMPORTANT ADVICE TO HOME GARDENERS

The success of your garden depends largely upon your own good efforts, but highly important also is the quality of the seeds and bulbs you plant.

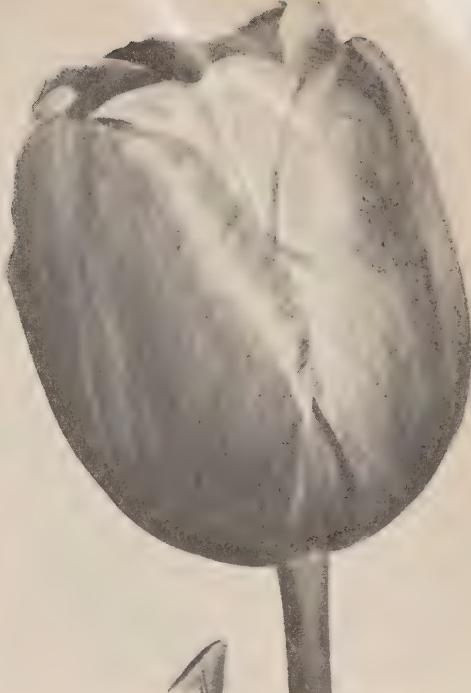

One of the first things for a new gardener to learn is that there are many grades of bulbs and seeds offered on the market.

Large healthy bulbs will produce strong healthy plants, and more and better quality flowers. Cheap low grade bulbs and seeds produce disappointing results and prove more expensive in the long run.

The bulbs and seed you buy are the least expensive part of your garden operations and the better quality of your original purchase will justify the further expenditure for fertilizer, water, and your own time.

### ORDER EARLY

Place your orders early and bulbs will be sent at the proper time for planting.
